

Using CSS selectors, create rules to improve the appearance of a photography portfolio site!

1	<p>Look over <b>index.html</b> to review the different HTML elements you have to work with, then navigate to <b>style.css</b>.</p> <p>Start by making the header section stand out a bit more. Select the <code>.header</code> element, and make its background color <code>CornflowerBlue</code> by using the <code>background-color</code> property.</p>
2	<p>Now change how the text is aligned in the top <code>.header</code> section.</p> <p>In your <code>.header</code> rule set, align the text in the center using the <code>text-align</code> property.</p>
3	<p>Next, use CSS to make the paragraph below Samantha's name have a larger text size.</p> <p>In <b>style.css</b>, select the <code>.about-me</code> element, and set its <code>font-size</code> property to <code>20px</code>.</p>
4	<p>The <code>.about-me</code> paragraph looks a little dark against the light blue background, maybe it would look nice if it blended more with the background.</p> <p>Within the <code>.about-me</code> selector, use the <code>opacity</code> property to make it 50% transparent.</p>
5	<p>In the Projects section, make the section titles bold.</p> <p>Select the <code>.title</code> elements, and add a <code>font-weight</code> property to make their text bold.</p>
6	<p>Change the main title color so that it matches the background color more nicely. Set the color for <code>h1</code> elements to <code>Azure</code>.</p>
7	<p>Instead of the page being in the default Times font, change the font of the entire page. Select the <code>body</code> element and make the <code>font-family</code> of the page <code>Georgia</code>.</p>
8	<p>Finally, let's make the background of the page more interesting.</p> <p>Within the <code>body</code> selector, set the <code>background-image</code> property to <code>hypnotize_bg.png</code></p>
9	<p><b>Stretch &amp; Challenge</b></p> <p>Great work! Feel free to keep coding and edit the visual rules to personalise the site's appearance!</p>
